AMENDMENTS TO THE CLAIMS

Please add or amend the claims to read as follows:

1. (Currently Amended) A surgically implantable drug delivery system, comprising ~~consisting essentially of~~ (a) a biodegradable polymer or copolymer, wherein said biodegradable polymer or copolymer consists essentially of selected from the group ~~consisting of~~ polylactide or and lactide-co-glycolide copolymer; and (b) 20 to 40% haloperidol fabricated into an individual, surgically implantable implant via solvent casting and compression molding at a temperature and pressure which allows the haloperidol-polymer material to flow into a mold for the individual, surgically implantable implant which is surgically implanted underneath the skin of a patient, delivers steady state concentrations of haloperidol to the patient for 5 months or more and is removable from the patient in the event the patient exhibits unwanted side effects following implantation.
2. Canceled.
3. (Currently Amended) The surgically implantable drug delivery system of claim 1, wherein the biodegradable polymer or copolymer is 50-100% polylactide and 0-50~~100~~ polyglycolide.
4. (Currently Amended) A method of producing an individual, surgically implantable implant which is surgically implanted underneath the skin of a patient for delivery of steady state concentrations of haloperidol to the patient for 5 months or more comprising: (a) dissolving haloperidol and a biodegradable polymer consisting

~~essentially of selected from the group consisting of polylactide or and lactide-co-~~
glycolide copolymer in acetone; (b) solvent casting the haloperidol and biodegradable
polymer solution to produce a completely dry haloperidol-polymer material; and (c)
molding under compression the dry haloperidol-polymer material at a temperature and
pressure which allows the haloperidol-polymer material to flow into a mold for the
individual, surgically implantable implant which is surgically implanted underneath the
skin of a patient, delivers steady state concentrations of haloperidol to the patient for 5
months or more, and is removable following implantation into a patient in the event the
patient exhibits unwanted side effects following implantation.

5. Canceled.
6. (Original) The method of claim 4 wherein the biodegradable polymer comprises 50-100% polylactide and 0-50% polyglycolide.
7. (Original) A method for treating patients with psychotic conditions and diseases comprising surgically implanting into a patient
